# Track C workshop plan

AI for Career and Productivity | November 15, 2026 | 45 minutes

Status: consolidated print draft for coordinator review. Rehearsal and all-coordinator approval remain unrecorded.

## Purpose and delivery

Participants use AI on familiar work, define what good looks like, improve an output, and identify the human checks and permissions needed to repeat it. Success means a useful result and a method they can use on Monday.

Two back-to-back rounds, 2:15-3:00 pm and 3:00-3:45 pm. Each has three independent cohorts of about 30, one per coordinator. Every coordinator runs every segment. Section authors are preparation owners, not rotating presenters. Each cohort has three tables with a timekeeping captain. No slide deck required.

## One participant packet

Print worksheets/Track-C-Workshop-Packet.pdf: agenda and coordinator QR codes; original final worksheet front; original final worksheet back; evaluation and exit card. Hand in the entire four-page packet. No separate take-home card. Do not collect email contents, generated documents or screenshots.

Use final/facilitator-run-sheet.pdf for coordinators. Editable sources and rebuild instructions are in final/README.md. Earlier worksheet exports in final/worksheets/ are superseded.

## Preparation and participation

- Bring a charged phone, Muse installed and signed in on a personal account if available, and one appropriate weekly task. App download, email connection and payment are not conditions of participation.
- Personal inbox connection is optional and participant-controlled. Before connection, explain the actual access requested, including whether it covers more than selected messages. Do not promise read-only or per-message access unless offered. Never connect an employer account.
- Anyone declining email access may follow a willing neighbor. The owner holds the phone and chooses only non-sensitive content to show. Do not ask anyone to justify declining. If sharing is unsuitable, the same reasoning can be done on paper.
- No sending, purchasing, public sharing, deletion or live autonomous actions. Keep confidential work, credentials, financial records and identifying information out. A personal inbox can contain sensitive information about other people. Do not read private messages aloud.
- Before the event, test actual mobile sign-in, consent, briefing, document export and disconnect. Do not promise untested features. Export failure uses visible text or a saved note while preserving the exercise.

## Common 45 minute flow

- **00-02 | Intro:** promise, house rules, willing-neighbor option, table captain. Page 1.
- **02-07 | Tool landscape:** categories, work examples, least access needed. Page 1.
- **07-12 | Prompting:** four parts, checkable quality bar, one habit to try. Page 2.
- **12-17 | Part 1:** choose a task and write a prompt. Page 2.
- **17-22 | Part 2:** brief appropriate emails and draft one reply; non-email participants continue their selected task. Page 2.
- **22-27 | Part 3:** create a useful one-page document from appropriate selected material; export if available. Page 3.
- **27-32 | Part 4:** revise the prompt, compare two outputs, record why, tune once. Page 3.
- **32-37 | Part 5:** map trigger, AI step, approval and destination; value and implications. Page 3.
- **37-42 | Evaluation and guardrails:** five checks, data sort, AI slop, access review and disconnect. Page 4.
- **42-45 | Wrap-up:** next step, measure, exit checks, whole-packet collection. Page 4.

## Facilitation priorities

- The source worksheet has five five-minute parts. The former agenda allowed 20 minutes; this agenda gives them 25. Landscape and prompting are five minutes each, guardrails five and wrap-up three.
- Email is the default, not compulsory. Keep non-email participants on their chosen task, then make a checklist, style guide or reusable reference. Map the chore worth repeating.
- Judge against the quality bar, not polish. Ask what was invented, omitted, too generic or unnecessary. A model's self-check is not independent verification. Comparing revisions from one app does not rank models.
- If left/right is awkward on a phone, label drafts A/B and record A as left, B as right. The owner controls what is visible. One voluntary sanitized share per table only if time allows.
- Protect task time and guardrails. Cut product tours, extra prompt rounds and table reports first. Aim for one useful result, not multiple polished exports.

## Evidence and completion

Hypothesis: completing familiar work, checking it against explicit criteria, and defining an approval boundary produces a practical next-week experiment.

Target: at least 80% of collected packets show a task and quality bar, one concrete revision with a measure, a human approval boundary, and a dated next step. Check written entries, not just ticks. People following a neighbor record their own reasoning. Distinguish generated, observed and paper-only completion when tallying.

Disconfirm success if most attendees only watch, cannot name a useful improvement, or believe inbox connection and all permissions are mandatory. Time saved is an estimate until measured including checking and correction.

Week 1: drafting. Week 2: summary or research with verification. Week 3: workflow map with approval. Week 4: repeat the best task and compare time, corrections or quality with the baseline. Share a sanitized result at work only if appropriate.

## Print and readiness

- Participant packet: 200 copies, four US Letter pages each; 180 seats plus 20 spare. Split 66/67/67 across coordinators. Duplex, long-edge flip: two sheets per packet. Keep all pages together for collection.
- Coordinator reference: one three-page run sheet each, plus a spare. Print single-sided for quick scanning. The two-page plan PDF is optional reference, not an attendee handout.
- Back-to-back reset: keep second-round packets within reach, separate completed packets, reset the timer and close private screens. Do not rely on a break.
- Before delivery: verify mobile permission/export/disconnect paths; test iPhone and Android where available; time a full rehearsal; test neighbor/no-network participation; assign prep communications and packet collection/storage.
- All coordinators explicitly approve the version after rehearsal. A merged PR does not prove approval. Print formatting does not prove delivery readiness.

## Authority and sources

worksheets/Track-C-Worksheet-final.pdf supplies the two unchanged exercise pages. The attached agenda/exit source is retained in worksheets/source/; its timing and collection wording are superseded by the packet. Vinit's current instructions govern optional willing-neighbor participation, compact QR placement, and whole-packet collection. Older proposals and exports are historical reference.
