AI for Career and Productivity Workshop Agenda

AI for Career and Productivity | 45 minutes | November 15, 2026

Time	Segment	What you do
2 min	Intro	House rules and the goal
5 min	Tool landscape	Where AI helps; choose the tool and access
5 min	Prompting	Four parts, one habit, a clear quality bar
25 min	Five-part exercise	Prompt; brief and draft; make a document; judge and improve; map an agent
5 min	Evaluation and guardrails	Check facts, AI slop, data and permissions
3 min	Wrap-up and next steps	Write your experiment and complete the exit card

Use the packet in order: agenda; exercise front and back; evaluation and exit card. Each of the five exercise parts takes five minutes.

Participation: email connection is optional. Follow a willing neighbor if you prefer; the owner holds the phone and chooses what to show. Use only non-sensitive material. Draft only; nothing is sent, paid, deleted or publicly shared.

Track C Worksheet

Name: _____ Table: _____

The four parts of a prompt

- **Context:** who you are, what is going on, and why it matters.
- **Intent:** what you want done.
- **Format:** length, structure, and who will read it.
- **Restrictions:** tone, what it must not invent, and what to leave out.

Six habits *From Anthropic, "Prompting best practices."*

- **1. Give context and say why.** A reason lets it handle cases you did not spell out.
- **2. Be specific, including what good looks like.** They do what you asked, so the ask should be the thing you actually want.
- **3. Say what to do, not what not to do.** "Do X" gives a target. "Do not do Y" leaves every other option open.
- **4. Show an example when format matters.** Showing beats describing. Use 3 to 5 diverse examples.
- **5. Give it a role in one sentence.** "You are my chief of staff." It sets the voice, not the IQ.
- **6. Ask it to check itself.** "Before you finish, verify your answer against my list."

Part 1: Prompt it (5 min)

Pick a real email you need on Monday, sanitized, or: a tricky email, meeting notes summary, meeting prep, a short proposal. End with: "Keep it under 150 words."

My prompt (four parts plus "good looks like" line):

Part 2: Get your briefing, then draft the top one (5 min)

Ask Muse to look at your 3 most recent emails in your own inbox and give you a briefing for each one: what do I need to know, when do I need to know it, and what do I need to do next?

My briefing (one line per email: Know / When / Next):

Now draft the most urgent one.

My draft (or the key lines of it):

Track C Worksheet (back)

Part 3: Make a document (5 min)

Ask Muse to make you something useful and save it as a PDF. Try different things. Start with this one:

> "Look at my recent meeting notes and the emails I wrote. Summarize my writing style: tone, sentence length, words I use often, and how I open and close. Turn it into a one-page style guide I can give to any AI so it writes like me. Create it as a PDF."

Other things to try: a cheat sheet for my role, a checklist for a task I repeat every week, a one-page "how to work with me" guide.

What I made:

Part 4: Evaluate it: blind judge (5 min)

Judge your PDF from Part 3. Swap with your partner; they make one change to your prompt, and you make a second PDF. Hold your own phone and show both PDFs, marked only "left" and "right," to a judge from the next pair. The judge views them on your phone, then scores on this sheet. Your phone stays in your hands.

Judge picked: ☐ **Left** ☐ **Right** ☐ **Could not tell**

Why, in one line (check for slop: generic, invented, too long, or delete it):

The one change that would make the losing version win:

Tune it: add that change to your prompt and make the PDF again.

Part 5: Turn it into an agent (5 min)

Design the agent for the same chore. Email first: summarize your emails, then draft / reply to 1 email.

Trigger: what starts it?	**AI step: what it does**
Human approval: you check it	**Destination: where it goes**

Value: saves me _____ / week. Implication: _____

Evaluation and Exit Card

Complete at minutes 37-45.

Name (optional): _____ Table: _____

A Evaluate your tool and your judgment

Tick what you checked. If something failed, note why beside it.

- ☐ Does it do the job?
- ☐ Is it accurate against the original source?
- ☐ Is it fast enough, including checking and fixing?
- ☐ Is the access appropriate for this task?
- ☐ Would I use it again for this task?

AI slop: what was generic, invented, repetitive or unnecessary?

What I changed or deleted: _____

Green / Yellow / Red

GREEN: appropriate to share. YELLOW: check policy or permission first. RED: do not upload in this workshop. Keep credentials, confidential records and private details out.

Public job posting: ____ Fictional meeting time: ____ Internal notes: ____
Client financial record: ____ Password: ____

B Check your work and choose the next step

- ☐ A familiar task, chosen tool and written "good looks like" definition.
- ☐ One improvement with a measure (time, errors or edits).
- ☐ A workflow with human approval, estimated value and an access boundary.
- ☐ A concrete next step and date.

Today I: [ ] generated output [ ] followed a neighbor [ ] worked on paper

Your 30-day experiment

Week 1: draft. Week 2: summarize/research. Week 3: map a workflow.
Week 4: repeat what worked and compare with your starting point.

My next step: _____ By: _____
My measure: _____

Share a sanitized result at work if appropriate. Measure time including review and fixes; do not claim savings you have not measured.
